BTS-1 BATTERY TO SPARE
BACK-UP SYSTEM
RetronProducts.com

The Re-Tron BTS-1 Battery To Spare Cabinet is the smart solution for rapid response to battery failure. Precious downtime is reduced to just minutes with this mobile, self-monitoring, float-charged battery backup cabinet system.

Battery failure? No problem with the BTS-1 on site

The Re-Tron BTS-1 is configured for top terminal 12V VRLA batteries for immediate and easy installation. The BTS Battery Cabinet is the first of its kind to feature a built-in control panel to monitor the charge of the batteries it contains. This ensures fresh batteries are always available and are more reliable than those stored in any other way.

How does it work? Unlock and roll!

The BTS Battery Cabinet is a rolling workstation. It contains everything needed to swap a failed battery out with a fresh one, and eliminates heavy lifting. The BTS Battery Cabinet features a convenient control handle and hand brake that allows users to easily direct the BTS to the area where fresh batteries are needed by moving the entire unit rather than one battery at a time. The braking device allows for seamless control in even the most difficult site locations. Cabinet doors are removable to allow access in tight corridors, and parking the cart is effortless; simply come to a full stop and lock!

A no-fail reputation means reorders

In the event of a battery failure, with the BTS Battery Cabinet, your client will have the proper fully charged replacement battery on site and available for immediate installation. This prevents any negative word of mouth from a potential costly battery failure and ensures years of battery re-orders, positive company exposure and a solid product reputation.

A unique marketing tool

The top of the BTS cabinet has a removable and washable, non-slip heavy-duty mat, on the work surface that may be customized with logos or designs of the customer's choosing. The door fronts may also carry your logo or graphics.
